

formpak

Where compliance and creativity meet

Software solutions for the formulation and ingredient sectors

Formpak ensures companies in the formulation and ingredient sectors can create great products quickly, effectively and with the security that they meet regulatory standards.

We allow your creativity to flourish whilst simultaneously ensuring your products are fit for market, whatever the size of your company.

However, Formpak offers much more beyond our software. Our team's sector knowledge and expertise underpin all that we do and our customer support consistently receives positive feedback.

Our team consists of experts who know the complexities of creation inside out. Through their industry insight our software constantly evolves to help you manage complex ingredients, changing legislative demands and documentation requirements - all in one place.

Formpak started its life as Mitron Computer Services in 1982 in Winchester, UK, providing software to the fragrance and flavour industry.

We are now based at Colworth Park, Sharnbrook, Bedfordshire, UK. Our team has grown, the customers have multiplied and Formpak software solves problems for more people than ever before.

Our longest serving customer has been using Formpak for over
35 years!

Our software is scalable.
From small start-ups to some of the largest
creation houses in the world, they are all
Formpak customers.

Depending on the size of your company we have
the right price points to make it cost-effective.

Formpak software is available in 3 product
packages. Products can be customised enabling
you to build the ideal solution for your business.

The ideal entry level solution for the
formulation and ingredient sectors.

The perfect solution for product development
and regulatory compliance in the formulation and
ingredient sectors.

The quintessential solution for larger
groups in the formulation and ingredient
sectors.

Each Formpak product includes:

- A standard set of documents
- Remote one on one training allowance
- Full access to our online support content

Formpak products can be boosted to PLUS.

PLUS products come with a set of managed regulatory ingredients,
consisting of approximately 1,600 Aroma Chemicals and 300 Essential Oils.
Each ingredient contains:

- GHS hazard and transport information from the latest IFRA/IOFI Labelling Manual
- IFRA Limits from the most recent IFRA Standards Amendment
- Up to date Cosmetic Allergens

These ingredients are managed and updated by our Regulatory Team with
over 25 years of expertise.

Each Formpak product includes our core set of tools for:

Formulation Development

Formpak's formulation tools include rapid ingredient selection, creation history, easy handling of multi-level formulations, side by side composition view, powerful regulatory tools and real-time suitability checks. Product life cycle management tools and permissions give you robust control and traceability.

Regulatory Management

Formpak contains configurable properties and compliance checks to manage regulatory affairs across ingredients and formulations for different regions and products. Examples include calculating information such as GHS, Transport, IFRA and Allergens.

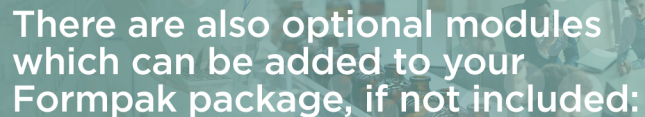

Document Management

Formpak enables you to author documents and labels, including Safety Data Sheets and Supply labels in 30 languages, Allergen Declarations and IFRA Certificates. Additionally, you can easily track the supply of documents and automate revisions and updates to customers.

Product Management

Formpak enables you to manage your ingredients and formulations libraries. Previous versions of compositions and properties are stored, providing a product history. Formpak includes powerful searching tools so you can find products in vast libraries based on any criteria including price, regulatory compliance and sensory attributes.

There are also optional modules which can be added to your Formpak package, if not included:

Advanced Regulatory Management

This module includes suitability checking. Suitability Constraints are rules or compliance checks which can be targeted at parties including regions, customers, and suppliers, for example to reflect policies about ingredient use.

Project Management

Formpak's Project Management module allows you to easily customise and build your own project templates to include tasks, workflow and status, allowing real time collaboration. You can also use our reporting tools to help with analysis of work in-house, past and present.

Poison Centre Notifications

Formpak enables you to generate an i6z dossier with a high degree of automation so you can efficiently submit Poison Centre Notifications (PCNs) to the European Chemicals Agency (ECHA), and additionally keep track of required updates.

System Communication Suite

The Formpak System Communication Suite enables integration with external systems such as enterprise resource planning (ERP) in a secure and flexible manner.

Certificate Management

Certifications are used when external validation or certification such as Organic, Halal and Kosher is required. An item can have multiple Certificates for the same property, e.g. the Organic status can be stored for more than one supplier of the same item and they can have different results.

Costing Methods

This module allows you to add special costing methods to Raw Materials. This can enable the cost of an item to allow for manufacturing methods and/or times, and volatile markets which impact ingredient costs.

Formpak Integration

The Formpak System Communication Suite enables integration with external systems such as enterprise resource planning (ERP) in a secure and flexible manner. External systems can query and update data and perform key operations in Formpak primarily using SOAP web services.

Please see the list of service communications below:

- Print Document Services
- Raw Material Services
- Item Services
- Cross Reference Services
- Attachment Services
- Project Samples Services
- Formulation Services
- Item Scope Services
- Company Services
- Suitability Check Services
- Project Services
- External Sample Services

Formpak Enterprise includes the complete System Communication Suite, with communication options also available for Formpak Essentials and Advanced.

Formpak Support

Our customers say they love our friendly and helpful team which is only a call or an email away. This support is underpinned by access to our Support Centre with hundreds of focussed topics about how to use the software, guidance on regulations and other complex topics.

Formpak offers industry leading support and expertise to all our customers located from the West Coast of America to the East Coast of Australia.

All Formpak users have access to our Multi-Channel support and training:

SUPPORT CENTRE

24/7 Support - The Support Centre is the hub for our support and training resources, including over 140 articles. Formpak also has an in-application help centre containing information on each application function.

TRAINING PLANS

Our Training Plans have been created to help build knowledge and understanding of Formpak. Each plan focuses on a different area of the software and contains links to the relevant training content.

SUPPORT TEAM

Our UK based Support Team help customers directly via email, telephone and screen sharing tools. They also offer training for new Formpak customers and host training days throughout the year.

YOUTUBE CHANNEL

The Formpak YouTube channel features easy to follow training and support videos.
